

Gain more control over your schedules, reduce your costs, and empower your teams

24K+ shifts scheduled each day in Canada

11% average cost reduction

80% of customers reduced overtime

Employees

More control over schedules and improved work-life balance

- Autonomous shift exchanges and giveaways with colleagues
- Schedules that consider leave requests submitted through self-service features
- Real-time schedules accessible on mobile 24/7

Schedulers

Faster schedule creation and easier last-minute changes management

- Master templates with flexible tools that automate schedule creation
- Automated shift callout with SMS and voice messages to reach out to many employees at once
- Allocation and replacements of shifts based on collective agreement rules, unit guidelines, skills and more

Managers

Accurate data on attendance, costs and variance from budgeted hours

- Devices that capture employee clock in and out times, and transfer the data to payroll
- Reports and analytics on real-time workforce data, including agency resources tracking
- Highlighting of variances from the budgeted position hours

Facilitate the process of shift replacement with the Automated Shift Callout feature

An employee calls in sick or a leave request is approved

1

An open shift is created on the staff schedule

2

Shift replacement is initiated by a scheduler or manager

3

Pre-defined rules are applied to determine the priority order to contact suitable replacement staff

4

An automated shift offering is sent via mobile application, text message (SMS) or auto-call, and on the employee calendar

5

Interested employees can accept the shift in the same manner they received it or through the calendar

6

The shift replacement occurs, and a confirmation notification is sent to the employee who is awarded the shift

The open shift is replaced with a minimal manual process
